

CAREGIVERS OF PEOPLE WITH DEMENTIA AND COVID-19

Understanding the caregiver experience

RESEARCH PARTICIPATION

If you are a main carer for someone with dementia, you are invited to take part in a confidential online survey. The survey will take about 20 minutes of your time.

The main goal of this study is to better understand the caregiver experience during COVID-19.

This research will increase our knowledge on how the pandemic has affected caregivers, and guide us to help caregivers in the future.
