PARTICIPANTS NEEDED FOR RESEARCH STUDY.

RESEARCH LED BY THE UQ SCHOOL OF PSYCHOLOGY

We know therapy works. But how?

Research shows that numerous factors can influence a person's response to therapy; some of which are indirect and not specific to the content of the treatment itself. In this study we will be examining these indirect influences further, focusing on how feeling connected and aligned with your therapist or with others in a therapy group can influence how well people respond to the treatment they receive.

To examine this question, we have created an online survey that is anonymous and can be completed by anyone who is in treatment or completed treatment in the last 3 months. The survey takes approximately 15 minutes and can be accessed via the QR code or alternatively, by clicking on the link below.

Are you eligible?

- 18 or over
- A current or recent client of one or more of the following:
 - Individual therapy
 - Group therapy
 - Wellbeing or support group
